

BusinessIT Security protects the end user by managing identities, endpoints (laptops, mobile, tablets, kiosk), applications, databases and the network infrastructure.

Our Services

- Design & Implementation
- Rapid Response and Migration Services
- Proof of Technology
- Security Framework Adoption
- Optimization and Fine Tuning

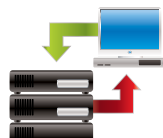

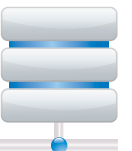

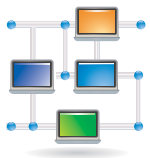

Endpoint Management

- Encryption
- Backup & Recovery
- Patch Management
- Security & Compliance Management
- OS Deployment
- Remote Desktop Control
- Asset Discovery and Inventory
- Service Desk
- Application Discovery and Dependency Management
- Software Use Analysis
- Power Management
- Core Protection

Mobility Management

- Containerization
- SecureEmail
- SecureBrowser
- Mobile Application Security
- Mobile Device Management
- Mobile Content Management
- IBM Notes Traveler
- Ms Exchange ActiveSync
- Google Mail
- Identity Management
- Secure Network Infrastructure

POWERED BY:

Cisco Borderless Networks is the brand name for a set of hardware and software technologies which allows "anyone, anywhere, anytime, and on any device" to connect to an organization's network.

Cisco Borderless Networks is enabled by an architecture comprising routers, switches, wireless and security systems, WAN acceleration, and energy and building management systems.

Cyberoam ensures high levels of network security, network connectivity, continuous availability and secure remote access with controlled network access to road warriors, telecommuters, partners, customers.

Comprehensive Security from Layer 2 to Layer 8 - Cyberoam network security appliances, available as UTMs and Next Generation Firewalls, deliver enterprise-class network security with stateful inspection firewall, VPN and IPS, offering the Human Layer 8 identity-based controls and Layer 7 application visibility and controls.

It's a new IT world. How secure are you? - IBM Security
Detect, prioritize, address and help prevent security breaches

IBM® Security solutions are built on a framework that spans hardware, software and services. These capabilities comprise a comprehensive and robust set of tools and best practices designed to help address:

Intelligence: Through a common and intuitive view that combines deep analytics with real-time security intelligence.

Integration: Through unifying existing tools and infrastructures with new forms of defense in order to reduce complexity and lower the cost of maintaining a strong security posture.

Expertise: Through a more proactive and trusted source of truth in order to stay ahead of emerging threats and risks.
